

ReleaseProcess19rc2

Release 1.9 rc2

Table of contents

Was released 28 June 2004 and is available from SourceForge
Fixed

- tiki-install.php spits out many "variable undefined" errors (terence)
- Restoration of Forum moderator controls (rlpowell)
- Replies to replies to forum topics are hidden when viewing forum topics (rlpowell)
- Blogs posts appear when posted instead of at session expiry (damian)
- fixed an overlap problem with moreneat and IE (mose, oliver, marc)

Changed

- Removed avatars and packaged seperately available from <http://mods.tiki.org/project6> (damian)
Warning : This may confuse your users that already chose one of those avatars

Enhanced / Added

- Countless usability/user interface improvements like:
 - cross-linking in Admin pages to ease navigation
 - action feedback/confirmation messages (aka TikiFeedback)
 - less ambiguity in pages that handle both object creation and editing/removal
- Make help tips optional with the \$feature_help (damian)
- Improved damian.css even more making right hand modules a different colour! (damian)
- added score events to wiki edit page (damian)
- score internals were refactored and all events listed in Score admin are being scored
- new plugin THUMB for displaying images in wiki pages (mose)
- upgraded smarty to 2.6.3. see <http://smarty.php.net/misc/NEWS> external link for changelog (mose)
- translation formatting if enabled (damian)
- Text changed in admin area as application menu can be anywhere (damian)
- Moved search stats to sit with fulltext option on admin search page (damian)
- Reworked the Actions boxes of galleries so that delete is rightmost for better slippymouse click protection wink (damian)
- upgraded adodb from 4.05 to 4.23 (mose)
- ongoing german translation (ohertel)
- reactivate Hide anonymous-only modules from registered users

Known Bugs

- Seems that edit warning is sticking even when saved.

Screen grab

Bad handling of css in InternetExplorer

g update! [Dan](#) [Parker](#) on: Mon 02 Aug, 2004 **19:50 UTC** [✉](#) (113 reads)

Bad overlay on IE 6

I recently upgraded doc.tikiwiki.org to use [TikiWiki](#) 1.9 development code, this will enable us to use the new multilingual features of [TikiWiki](#) to collaborate the documentation in different languages from within one site. Please if you can assist with documentation writing or translating, surf over and pick a page to get started.

Poor space handling of Reply button for comments

Note that comments with multiple replys lose spacing on right edge.
